1. Dynamic URLs

2. URL redirection

3. Building URLs

What's a dynamic URL ?

A URL that gets generated automatically based on certain inputs is a Dynamic URL

What's URL Redirection ?

It's the process in which when users visit a particular URL, they're navigated/guided to a different URL

How is URL Redirection helpful ?

- If a page is deleted, users need to be redirected to another URL
- If maintenance of a web page is going on, users can be redirected
- If website gets renamed, users can be redirected to appropriate URL

Common Response Codes:
